Personalized Curated Protocols

Our Approach

At StemRx, we believe in a comprehensive and integrative approach to treating Autism and Cerebral Palsy, ensuring that every child receives personalized care tailored to their unique needs. Our treatment journey begins with a complete brain mapping and detailed assessments to gain an in-depth understanding of the patient's neurological and developmental condition. This thorough evaluation allows us to craft a 360-degree treatment plan that addresses both core challenges and associated factors impacting the child's overall well-being. Our individualized treatments are designed to enhance speech, behavior, cognitive development, intellectual capabilities, social interaction, and sensory processing—all of which play a crucial role in improving the child's quality of life. Beyond these primary aspects, we also focus on essential health parameters such as sleep patterns, appetite, weight management, and overall growth, ensuring a holistic and well-rounded therapeutic experience. At StemRx, we don't just provide treatment; we build a support system that extends before, during, and after therapy, offering continuous monitoring and guidance to help children achieve optimal progress. By addressing every aspect of development and well-being, we empower children and their families with the best possible outcomes, unlocking their true potential for a brighter and more independent future.

At StemRx Hospital & Research Centre, we house a state-of-the-art GMP-grade biotech laboratory, ensuring the highest standards in biomedical research. Our certified BSL-II, GMP-compliant lab is designed to facilitate cutting-edge and breakthrough research in the field of regenerative medicine.

At StemRx, we bridge the gap between bench to bed research, offering innovative regenerative solutions for complex medical conditions. Our unwavering commitment to scientific excellence & compliance ensures that we continue to redefine the future of advanced biotechnology and personalized medicine.

Our lab is equipped with state-of-the-art facilities

- Laminar Flow Hoods & Hypoxia Cell Culture Chambers
- High-Throughput Ultracentrifuge (exceeding 1,00,000 G-force)
- Co₂ Incubators & Long-Term LN₂ Storage Facility
- Flow Cytometry Machine
- Commitment to Excellence:
- Quarterly Internal Audits & Annual Government-Approved GMP Audits
- A Dedicated Research & Development Unit with innovation-driven projects

OUR GALLERY

Our Treatment Protocols

Our treatment protocols are meticulously designed to provide evidence-based, personalized care, ensuring that each patient receives the highest standard of treatment tailored to their unique needs and circumstances.

Addressing Toxicity

Targeting Gut-Related Toxicity for Neurological Health

Due to the incorporation of knowledge of several medical specializations, this treatment method assists addressing the autism spectrum disorder, as well as other developmental disorders, through assuring complete & effective treatment.

Intestinal Microbiota Transfer (IMT)

Enhancing Gut Health for Better Brain Function

IMT enhances gut health and sustains the gut-brain axis by clearing toxins and restoring equilibrium which is crucial for cognition & general health especially among individuals with autism and similar disorders.

Detoxification Techniques

Advanced Detox for Autism and Cerebral Palsy Treatment

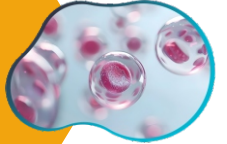

Such therapies as hyperbaric oxygen therapy (HBOT), ozone, chelation & many others prevent and eliminate neuro-inflammation & detoxify the body, which is the best for treatment of autism & cerebral palsy.

Regenerative Medicine Cellular Therapy

Reinvigorating Brain Function for Autism Patients

Cellular therapy is a branch of regenerative medicine that activates parts of the brain, decreases hyperactivity, and improves cognitive functions in patients with autism providing them with new perspectives for recovery.

Growth Factors & Peptides

Boosting cellular therapy Therapy with Growth Factors

Along with cellular therapy therapy, StemRx harnesses the potential of growth factors & peptides for accelerating the healing process, thus enhancing the effectiveness of cellular therapy therapy for autism & other conditions.

Cross- Disciplinary Treatment

Integrating Multiple Disciplines for Holistic Autism Care

In combination with cellular therapy therapy, StemRx utilizes growth factors and peptides to enhance healing, accelerating the therapeutic impact of cellular therapy in autism and other conditions.

Other Programs By StemRx

Parental Guidance Program

StemRx supports parents with specialized counseling, offering knowledge and emotional guidance to empower them throughout their child's treatment journey.

Home training Program

StemRx have unique Home training program to families with essential skills and guidance to support their child's recovery at home, fostering continuous improvement and enhancing overall treatment outcomes.

Follow Up Program

StemRx has devised an admirable Follow-Up Program to follow up on the progress of your child after treatment. Our post-treatment support ensures that any changes or new developments are tackled on time.

Medication Delivery Program

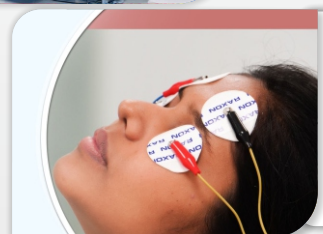

As a part of our complete care, StemRx also offers a Medication Delivery Program that assures needed medications are sent directly to the comfort of one's home
